PROJECTS

Printing Order Placement & Online Payment System

- Developed a responsive printing order management web application using HTML, CSS, Bootstrap, and JavaScript for frontend development.
- Implemented backend functionalities using PHP and MySQL for user authentication, order processing, and database management.
- Integrated secure online payment system with automated order handling and dynamic data storage for efficient transaction processing.

Design And Development of a Fullstack Web Platform For Catering and Door Delivery Food Services Management

- Developed a full-stack catering and door delivery food service management platform using React, Node.js, Express.js, and MongoDB.
- Designed responsive user interfaces and implemented backend APIs for order management, user authentication, and real-time service operations.
- Integrated Pollinations AI chatbot to automate customer interaction, food inquiries, and service assistance within the web platform.

Construction Helmet Detection

- Developed a real-time construction helmet detection system using YOLOv5 and Python for automated safety monitoring.
- Built a web-based interface using Flask, HTML, and CSS to display live detection results and safety alerts.
- Implemented computer vision techniques with Python libraries (OpenCV, NumPy) to improve workplace safety compliance and monitoring accuracy.

CERTIFICATES

FullStack development with AI Certificate	Mar 2026
AICTC: AWS AI and ML Certificate	April 2025
AICTC: Android development Certificate	Dec 2024
